

Can you see Venus?

"This is the message we have heard from him and declare to you: God is light; in him there is no darkness at all."

1 John 1:5

We have been talking about how God's light shines through us in a dark pandemic time.

This week, at night, if you go out when there are little or no clouds you will see the moon and what looks like a very bright star.

Well that's not a star but its the planet Venus at its closest approach to the sun. If you have binoculars, take a look at the moon and you will see craters that you cannot see without binoculars.

Many astronomers believe that the planet Venus was used as God's guiding star to lead the wise-men to Bethlehem at the time of Jesus' birth. Enjoy the beautiful lights in the dark sky this week even as you shine for Christ during this time!
